

### Review Group 16 – HW3

Your code works nicely and includes the Replay Buffer, the DQ network and training algorithm. You fulfilled all requirements. Appropriate comments together with easy-to-understand variable names make the code very readable.

Your visualization is very clear and the progress in further episodes is immediately obvious. Though in future projects you should maybe not include output messages for every step in the preview, but rather only for the different episodes, as the notebook preview almost didn't load at ~30,000 lines :). Great job overall!
